

High Level Virus Protection, Bacteria and Deep Cleaning Service

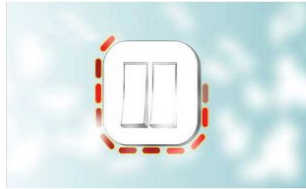

We've put together a step-by-step guide outlining our sanitisation cleaning process, so you'll know exactly what to expect from your first contact.

Step 1

Vaporisation produces a fine mist of specialist cleaning agent

Step 2

Because it's a vapour, it can get into hard to reach places

Step 3

It eradicates any airborne pathogens and surface bacteria

Step 4

Disinfects whole room, floor to ceiling, ensuring it is safe to re-enter

Step 5

Final thorough wipe down of all high traffic surfaces

Who we are

Welcome to **MaxCleaned**, we are working with our existing and many new clients during this difficult time to provide a cost effective, completely safe sanitisation solution, ensuring **your** workplace can remain open and it is safe for **you, your** staff and clients

This pandemic has put cleanliness and hygiene at the top of the agenda. **MaxCleaned** are 'On the front line' of the fight against this pandemic with cutting edge hygiene technology and High Level Disinfectants (HLD's) we are taking cleaning to another level.

How do we do it?

We use the latest **MaxCleaned** ULV Nano Particle Machines that

-  Attack membranelipids
-  Inactivation of energy producing enzyme
-  Denaturing proteins
-  Disrupting cell wall permeability
-  99.99% decontamination guaranteed

These advanced variable rate sanitisers can dispense Nano particles from 5 microns fired at a rate of 300,000 per hour, meaning it delivers some of the fastest acting and most powerful Virus, Bacteria, Fungi killing products available today killing 99.999% of viruses, including the Corona Virus Family, yet they cause no harm to humans plants, animals and aquatic life.

When traditional sprays and wipes' dry, they are effectively useless. **MaxCleaned** ULV Nano Particle Machines deliver the sanitising agent into the fabric of the area that is being sterilized this includes carpets, furniture, walls, office and electrical equipment where no other cleaning product can reach, and continues, depending on the chemicals you choose, to work for between 7 and 30 days after the initial application.

Step 1 | Initial enquiry

Our professional team will take your call, email or online enquiry and go through your situation, discussing the current condition of the residential or commercial site in question, gathering the required information.

Making Your Business Covid Secured

Your dedicated advisor will then recommend a bespoke sanitisation cleaning service, which fits around your exact needs and confirm a quotation cost.

Taking some initial information, we'll then arrange a suitable time and date for cleaning works to be carried out.

Your advisor will be on hand throughout the process from beginning to end.

Step 2 | Pre-work preparations

For your own peace of mind, prior to arrival you will be provided with a copy of our risk assessment, in addition, site specific RAMS will be updated upon arrival on site, please check this upon receipt to ensure that you are comfortable with everything included.

For your convenience, we offer a 24 hour service, our specialist cleaning provider will arrive on site at the arranged date and time.

Your specialist will ensure that the site is adequately lit, ventilated and is generally safe to conduct works in, advising you of any issues they come across immediately.

Once this is carried out to the appropriate standard and all parties are in agreement with the risk assessment, the decontamination and cleaning works can begin.

Step 3 | Conducting cleaning works

Your cleaning specialists will work swiftly and methodically, ensuring every inch is thoroughly cleaned to the highest possible standard.

Our efficient machines will be adjusted as required on site to ensure the correct micron applications, covering the agreed area.

If you have chosen our upgraded package, then in addition we hand wipe with microbial disinfectants high use touch points:

Monitors. keyboards. mice, headsets, microphones and telephones, arm rests, access keypads. handles of doors, on cupboards, in kitchens & bathrooms. as well as any other touch sensitive equipment pre agreed.

During the process, the working area will be inaccessible and must remain so until the specialist advises that the area is safe to enter.

Step 4 | Post works & Aftercare

We provide you with Hard and Soft copy Certification to display on site and online.

To complement **your** existing cleaning schedule we recommend undertaking regular decontamination cleaning, we will agree a follow up program to keep **your** business, staff and clients safe.

MaxCleaned offer cost effective repeat cleaning packages to maximise the value to **you** of the service.

Regular fogging ensures all the nooks and crannies with airborne pathogens are taken care of.

If **you** have any queries, we are always on hand at the end of the phone for advice whenever **you** need us on 0345 6000 967
